The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention. The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritis-associated viruses, and also for prevention and treatment of infection with these viruses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540

                                                                                                                                                                                                                                                                                                                                   9
                                                          New isolated nucleic acid and their fragments having the pol gene of a retrovirus, useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis.
                                                                                                                                             The invention relates to an isolated nucleic acid which comprises the gene of a retrovirus associated with multiple sclerosis or rheumatoid arthritis. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AGCAATACTATAGACACAACCAGCTCCCAATGCATCAGGTGGGTAACACCTCCCACAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the nucleotide sequence corresponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple Sclerosis retrovirus (MSRV-1). The specification describes a long terminal repeat (LTR)-RU5 region which encodes the expression of a MSRV-1 protein. This is unusual for LTRs, in particular in the RU5 region. The sequence includes CAAT and TATA signals which are present in the U3 and R regions and are not directed towards the CD5 indicated in the features table. Probes and antibodies to the MSRV-1 retrovirus protein and encoding polymucleotide sequences are used to detect the presence of MSRV-1 retrovirus in a biological sample. (Updated on 06-AUG-2003 to correct OS field.)

The envelope protein expressed by the endogenous human retrovirus MRSV-1 has be protein expressed by the endogenous human retrovirus MRSV-1 has be detected using the method of the invention. The specification describes a process for detecting activity of a superantigen in a biological sample. The process comprises identifying large scale expansion or loss of lymphocytes that carry at least one of the Wobtal6 and/or Wobtal7 determinants. The method is used to screen for agents that inhibit the superantigen, especially those associated with MRSV-1 which is implicated in autoimmune disease, particularly multiple sclerosis.

These agents are potentially useful for treatment or prevention (e.g. as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

The nucleic acids comprise pol, gas or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides, antigenic peptides or conserved motifs). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated or purified nucleic acid associated with multiple sclerosis and/or rheumatoid arthritis, useful for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 GCACCCCTCCATGCTGCTGTACAACCAGTAGCTCCCCTTACCAAGAGTTTCTATGAAGN 120
viral material associated with multiple sclerosis or rheumatoid arthritis, a polypeptide exhibiting an inhibitory activity on the proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and antibody directed against the MSRV-1 virus obtained by immunologically reacting a human or animal body or cells with an immunopolic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-associated sequence whose identity cannot be accurately determined. Note: The SEQ ID numbers for the sequences as displayed in the main body of the patent do not match the SEQ ID numbers in the sequence listing. Consequently those sequences mentioned in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

The invention relates to human embryogenesis associated proteins (EMBRY) and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility, endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, contact dermatitis; disorders of the placenta such as precelampsia, abruptio placentae etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humanised animals or transgenic animals to model human diseases. They are also used in gene therapy. The

syncytin expression. The syncytin modulators are useful in diagnosis and treatment of preclampsia and gestational trophoblast disorders (e.g. choriocarcinoma, hydatiform mole, placental site tumour and missed/ incomplete abortion). Syncytin is a human gene derived from the envelope gene of human endogenous defective retrovirus, HERV-W. The present invention is based partly on the discovery that syncytin expression is dramatically reduced in preeclampsia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying a compound for treating a subject with or at risk of eveloping preeclampaia, comprises determining whether the expression or activity of syncytin in the cell is modulated in the presence of a test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to identifying compounds which are modulators of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               930 AIGGCCTCCCTTAICATATATATATCCTTTACTGTATATACCCTCTTTACCTCTCTCATA

The products of the invention are predicted to have biological activities which would make them suitable for treating, preventing or supporting medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, activity, activity, insume scinic activity, receptority issue growth activity, hemostatic activity, receptoriligand activity, activity, activity, cacherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Secreted protein; testes; brain; blood; placenta; human; murine; thymus; bone marrow; treatment; prevention; nutrition; cytokine; immune; vaccine; cell proliferation; cell differentiation; suppressor; tumour inhibition; haematopoiesis regulator; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; receptor; ligand; anti-inflammatory; tumour; cadherin; tumour invasion suppressor; gene therapy; tissue growth; ss.

                          This is the human secreted protein AJ172 2 nucleotide sequence, obtained from a human adult testes CDNA library. The invention relates to secreted human and mutrine proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for an imal preventing or ameliorating medical conditions in humans and treating, preventing or ameliorating medical conditions in humans and diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity, (e.g. in feeds), cytokine and coll proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemacopiesis regulating activity, chemotactic/chemokinetic activity, haemacopiesis regulating activity, chemotactic/chemokinetic activity, haemacotatic and thrombolytic activity, creeptor/ligand activity, and tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotide sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1647

```

The invention relates to a protein comprising fully defined AZ302 1 protein or BD127 1 6 protein. The polynucleotides are useful for protein or BD127 1 6 protein. The polynucleotides are useful for capressing recombinant proteins for analysis and are also useful as chromosome markers or tags to identify chromosomes or to map related gene positions. The proteins are useful as amino acid supplement, carbon source, nitrogen source and carbohydrate source. The proteins are useful for treating various immune deficiencies and disorders (e.g. multiple combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple comporosis, systemic lupus errythematosus, rheumacoid arthritis), allergic reactions (e.g. asthma), myeloid or lymphoid cell deficiencies, osteoporosis or osteoarthritis, pertipheral nervous system disease), coteoporosis or osteoarthritis, pertipheral nervous systemic inflammatory response syndrome (SIRS), ischaemia-repertusion injury, Crohn's disease), coagulation disorders, inflammatory diseases (e.g. systemic inflammatory response syndrome (SIRS), ischaemia-repertusion injury, Crohn's disease), anaphylaxis and hypersensitivity. Proteins are also useful for inducing tumour immunity, for inducing bone, cartilage, tendon, ligament and/or nerve growth or regeneration, for proliferating nerva and brain tissue, for inducing fertility and for inhibiting tumour growth. Proteins are also useful as chemckine for mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also useful as inhibitors of receptor/ligand interactions. The present sequence represents cDNA encoding a human secreted protein. Proteins A23021 encoded by clone A23021 from human adult colon, and BD12716 encoded by clone BD12716 from human fetal kidney cDNA library, useful for treating e.g. multiple sclerosis and rheumatoid arthritis.

cc was been located on the long arm of human chromosome 7 (7q21-22) has been designated HERV-W. The present invention describes proteins or peptides (1) having superantigen (SAg) activity comprising the ENV protein (BNV) of HERV-W, the surface protein (SU) and transmembrane (TN) sub-units. (I) have neuroprotective activity, and can be used in: vaccines; antisensetherapy; and HERV-W SAg activity-inhibitors. (I) and encoding DNA/RNA are useful for idangosing multiple sclerosis (MS) or HERV-W-associated disorders. (I) are also useful for identifying substances (and optionally recovering) capable of binding to a retroviral superantigen associated with MS, substances capable of blocking sAg activity and substances capable of blocking transcription or translation of HERV-W retroviral superantigen. A protein or peptide derived from (I), modified to be gainst HERV-W retroviral SAg is useful in therapy. Nucleic acid molecules encoding (I) are useful as vaccines against MS. Substances capable of blocking transcription or translation of HERV-W retroviral superantigen for use in treating or translation of HERV-W retroviral superantigen for use in treating or preventing MS. Obtained using (I) are useful for the treatment and corrective prevention of MS. (I) and nucleic acids encoding them are useful for diagnosing autoimmune disease. The present sequence encodes the specifically claimed envelope protein of HERV-W designated G specifically claimed envelope protein of HERV-W designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AGCACCCCTAGCCCCTACAAAGGACTAGTTCTCTCAAAACTACATGAAACCCTCCGTACC
